**Improving Routine Data in Child Health in
NMIS**

What is a Community-based information system (CBIS)?

A CBIS is a system for collecting, analysing, reporting and using community-focused health and/or social welfare information that can be used to inform programming and policy, target services to populations in need, monitor the continuum of care and address equity and access issues. It should enable information to be shared between community-based service providers and health facilities and government in order to better serve the population in need.

CBIS Model

CBIS Components

Enabling Environment

- System Design
- System Management
- Leadership and Governance

Information Generation

- Data Sources
- Data Management
- Information Products and Dissemination

System Performance

- Data Quality
- Data Use

CBIS Stakeholders

- National Government
- Local Government
- Facilities
- Civil Society
- Community Workers
- Households/Individual

This presentation was produced with the support of the United States Agency for International Development (USAID) under the terms of MEASURE Evaluation cooperative agreement AID-OAA-L-14-00004. MEASURE Evaluation is implemented by the Carolina Population Center, University of North Carolina at Chapel Hill in partnership with ICF International; John Snow, Inc.; Management Sciences for Health; Palladium; and Tulane University. Views expressed are not necessarily those of USAID or the United States government.
