

### **RACE Multi-Country Results Dissemination Meeting**

# Country Presentation on iCCM Programme and RAcE Project Achievements

Republic of Mozambique Ministry of Health

Abuja, Nigeria 24-27 October, 2017

## Mozambique Country Information

- Situated on south-eastern coast of Africa; borders six countries & Indian Ocean
- Population estimate: 29 million (2017)
- Portuguese is official language, spoken
   by ~ 50%, mostly as a second language
- Approx. 70% of population are rural
- > 50% live below poverty line
- 40% live > 8km from health facility
- Ranks 180/187 on Human Development Index

### Health Status of Children under 5

- Infant mortality: 57/1000 live births
- Under 5 mortality: 87/1000
- Stunting: 43% chronic malnutrition a major contributor to morbidity and mortality rates in children under 5
- Malaria is endemic throughout Mozambique, accounting for 29% of all deaths and 42% of deaths in children under 5

# Policy Framework for iCCM

- iCCM is implemented by Agentes Polivalentes Elementares, known as "APEs", who are community health workers that are part of the national health service
- In 2010, the APE program was revitalized and the national program was established in the Ministry of Health
- The national APE program is responsible for coordinating, planning and monitoring progress of iCCM
- The APE program has implementation, supervision and M&E guidelines and tools, and a 4 month standardized, pre-service training program

### iCCM in the RAcE Context

- APE program created in 1970s, focus on general primary health care
- Save the Children piloted iCCM for the 3 illnesses in 1 district with 30 APEs in 2007; expanded to 15 districts in 2 provinces in 2009
- iCCM for the 3 illnesses was the focus of RAcE support; RAcE also acknowledged & supported other tasks of the APEs
- RAcE provided technical assistance to the national, provincial, district, health facility and community levels to help strengthen government support systems
- RAcE was implemented in 52 districts in four provinces by Save the Children and sub-grantee Malaria Consortium under the MoH's leadership

### RAcE Project Area and Population

#### Nampula (SC) - 21/23 districts

- Total target population: 2,387,084
- Total target population <5: 427,009</li>

#### Zambezia (SC) - 12/19 districts

- Total target population: 901,602
- Total target population <5: 149,974</li>

#### Manica (SC) - 6/9 districts

- Total target population: 407,784
- Total target population <5: 57,028</li>

#### Inhambane (MC) -13/14 districts

- Total target population: 499,604
- Total target population <5: 85,432</li>

### RAcE Project Area and Population

### **TOTAL** in 4 target provinces:

- Districts covered: 52/64
- Total RAcE target population (APE database): 4,196,074
- Total population in target provinces: 13,578,219
- 40% of population >8km from HF: 5,431,288

- Total RAcE target <5 population: 719,443</li>
- Total estimated <5 pop in target provinces (17.1%): 2,321,875</li>
- 40% of <5 residing >8km from HF: 928,750

RAcE coverage = 77% coverage of target population in the 4 provinces where it was implemented

## CHW (APE) Profile

#### Selected by their community:

- Upstanding members of the community
- Minimally literate (Portuguese)
- Basic math skills
- 18 years +
- Target communities are 8-25km from health facility with coverage of 500-2000 population

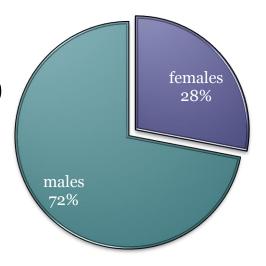

### Trained in government curriculum:

4 months (1/2 is practicum)

#### Receive:

- basic working kits of materials
- 2 medicine kits per month 'Kit C' and 'Kit AL (malaria specific)'
- Approximately \$20 per month stipend

### **APE** profile by sex

### CHW (APE) Profile

- Prior to 2010, APEs worked from fixed community health posts in their communities
- Presently:
  - Mobile no fixed posts
  - 80% health promotion and prevention and 20% treatment

### Reality:

- Higher focus on treatment
- Most are mobile but also work from home or work from fixed locations in their communities

### **APE Working Kit**

# **APE Training**

### RAcE supported

- pre-service trainings
- periodic refresher trainings
- training pilot of the new APE tasks in April 2015
  - Included new family planning methods, chlorhexidine, vitamin A, HIV and TB follow up and case finding
- Training in data quality and use in 2016

# **APE Pre-service Training**

- Approx 25 APEs per cohort
- Held in central locations for 4 months
- 50% was practicum
- Training was provided by MoH professional staff who were trained trainers
  - Trainees stayed in rented accommodation for the full period
- Curriculum was recently expanded to 5 months due to additional tasks

# **APE Supervision**

#### **Clinical Supervisors -** direct APEs supervisors. They are:

- ✓ Head of the health facility (usually had responsibility of 1-8 APEs)
- ✓ The highest level of health professional at that health facility (typically mid-level provider)

#### Their role:

- ✓ Conducted community visits, policy was once per month, but in reality was less frequently
- ✓ Conducted APE clinical skills assessments at health facility once a month

<u>Challenges:</u> insufficient transportation to reach APE communities; insufficient time to support APEs vis-à-vis their other responsibilities; frequent transfers of supervisors

# APE Supervision in Communities

- ✓ Reviewed patient registry books
- Clarified any questions, resolved concerns
- Reviewed stocks in kits
- ✓ Observed APE with patients (as possible)
- Discussed APE performance with Community Health Committees or Community Leaders

✓ Provided mentoring to APEs who had difficulties; noted concerns in the back of their registry books for follow up

### APE Clinical Supervisor Training provided by RAcE

- New clinical supervisors were trained in five day trainings
- In-service training/coaching was provided as needed by RAcE staff
- Refresher trainings were provided to update supervisors on new M&E tools, new APE tasks
- Training on data use and quality
- A total of 951 clinical supervisors received initial or refresher trainings during the RAcE program

### RACE Support for MoH APE Supervision System

RACE provided support for national, provincial and district levels of the APE program:

- Provided technical assistance with planning, coordination, data review / M&E, reporting at all levels
- Provided financial & technical support for quarterly meetings at the district level, annual meetings at the provincial level
- Financed national joint supervision to all the RAcE provinces annually
- Procured & delivered 47 motorcycles for APE supervision
- Provided transportation/per diems for supervision visits at all levels

APE supervisions are integrated into the national health system; all APE supervisors and coordinators have specific and clear roles on how they support APEs

## Monitoring and Evaluation

#### **APEs**

- Patient registry book
- Monthly summary forms: all key information, submitted to Supervisor at health facility

#### **Health Facility Supervisor**

 Compiles APE forms + health facility information, submits to district level

#### **District level**

 Compiles health facility forms, submits to province

#### **Provincial level**

 Compiles district-level forms, submits to central level

#### Central level

Compiles provincial-level forms

## Monitoring and Evaluation

- Funded the salaries of 2 M&E staff in APE program
- Assisted with the development of an APE database & APE mapping
- Data use training: conducted at all levels in 2016 to facilitate data review, verify quality, understand disease trends, and assist decision-making

### 2017 and beyond:

- APE malaria data is now incorporated into new national Monitoring & Evaluation System (SISMA)
- Data for diarrheal diseases, pneumonia, family planning, HIV & TB adherence, Vitamin A, Chlorhexidine, Misoprostol will be incorporated into the District Health Information System (DHIS 2) through mobile technology

## Supply Chain

### APEs receive 2 kits per month

- APE kit ('Kit C'): amoxicillin, oral rehydration salts (ORS), Zinc, paracetamol, etc. procured by government's National Directorate of Medicines & Medical Supplies (CMAM) with various donor support; APE kits are assembled outside of country
- AL kit: rapid diagnostic test (RDT) + artemether/lumefantrine (AL) treatment, assembled in Mozambique by the Deliver program, funded by the Global Fund
- Both kits are shipped together with other medicines to provinces

# **Supply Chain**

#### Stock outs

- Ranged from serious stock-outs (>3 months) to monthly shortages
- RAcE helped to reduce transportation bottlenecks in provinces
- RAcE worked with National
   Directorate of Medicines & Medical
   Supplies (CMAM) and JSI Deliver to
   troubleshoot stock-out issues

Disposal of expired medicines and poor storage conditions at APE residences effecting efficacy are still a concern

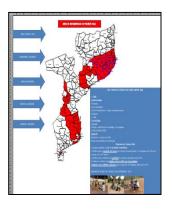

# Country Achievements: Policy Contribution

- RAcE provided technical support at the national level for developing and refining all the major APE documents, training modules, guides, manuals, tools, and job aids
- Operational research
  - APE Supervision Models (MC)
  - APE Workload Study (MC)
  - Barriers to Health Care Access (MC),
  - Quality of Care (SC)

### Country Achievements: APE training numbers April 2013 - December 2016

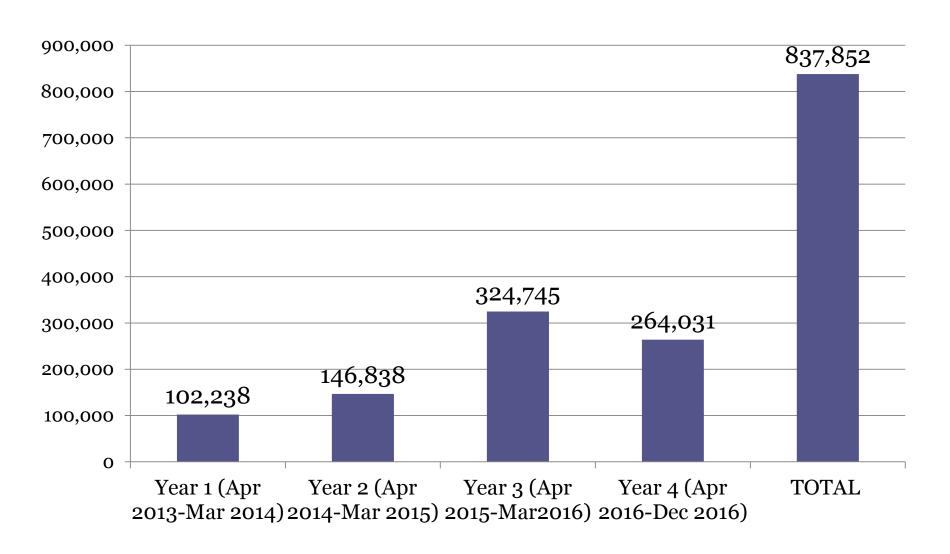

APEs trained in iCCM	1,445		
APEs trained in new package of interventions	755		
APEs trained on data quality and use	1,325		
APEs providing iCCM services	1,344		
Clinical supervisors trained	951		
Health Facilities with trained APE Supervisors (Mar 2016)	393/429 (92%)		
APEs who reported (Dec 2016)	1,232 (93%)		

- RAcE trained & deployed 200 APEs in Zambiezia with RAcE funding
- Trained 335 APEs in Nampula with World Bank funding
- Provided TA for several trainings funded by UNICEF and Irish AID
- Facilitated the deployment of 173 APEs in Nampula who weren't able to work due to lack of government documents

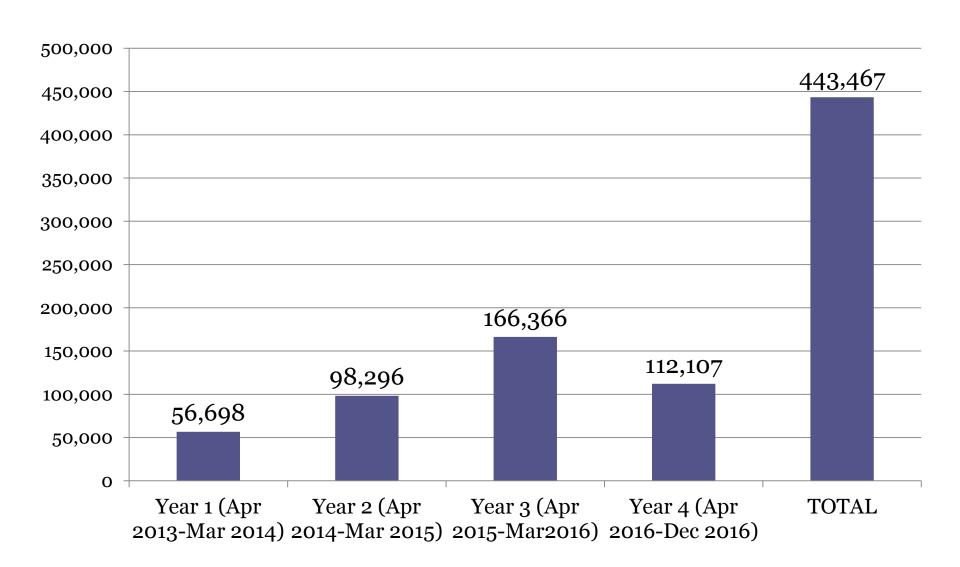

# Country Achievements: Treatment numbers April 2013 - December 2016

Cases of malaria in children <5 treated with ACT	837,852
Cases of children <5 pneumonia (defined as coughing and/or fast breathing) treated with Amoxicillin	585,989
Cases children <5 with diarrhea treated with ORS/and Zinc	443,467

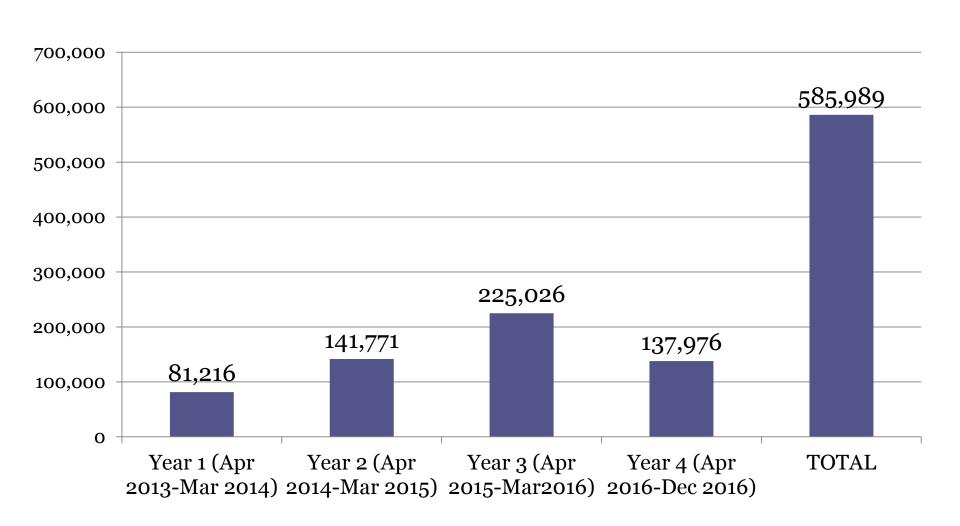

### Country Achievements: Malaria Treated Per Year

### Country Achievements: Diarrhea Treated Per Year

### Country Achievements: Pneumonia Treated Per Year

# Main Challenges: ICCM in Mozambique

- Implementing regular supervision visits
- Continuous stock-outs, particularly AL
- Data quality for decision-making
- Difficulty attracting and keeping female APEs
- Sustainability of the program still dependent on donor funding

### Conclusion

- The APE program and iCCM play a critical role in the provision of services to remote communities who would otherwise not promptly seek care
- In order to function optimally, supervision (especially transportation) and the supply chain still require strengthening
- During RAcE, the MoH & RAcE: strengthened the supervision structure and facilitated supervision activities; adapted and strengthened M&E systems; developed policies, guides, tools, job aids; nearly doubled the number of APEs in communities; helped analyse supply chain issues and resolve provincial supply chain bottlenecks; advocated for iCCM care seeking and promoted APEs through radio broadcasts; lobbied for donors to continue to invest in the program

**OBRIGADO.** 

KANIMAMBO.

THANK YOU.
