

Private Sector Engagement Subgroup Meeting
December 12, 2018

1) Report out on CHTF Steering Committee meeting

- 10 subgroup co-chairs met for 3 days, just added commodity and SC group
- Reviewed value-add statement and report out on progress to-date from subgroups
- How to make the CHTF more cohesive? Now have 500 members, should membership have criteria? Will share final report out with subgroup members when it's available
- Some felt there were too many subgroups/subgroups were duplicative, need to identify priorities where subgroups could work together
- Need to raise the visibility of child health, but questions if the CHTF was best primed to be the platform for expanded advocacy as the group has a technical tilt
 - Lots of fragmentation across approaches and interventions for child health
- Engagement and membership in subgroups is a common challenge
- Will look at areas where we can improve communications- will have subgroup call on a quarterly basis to track country level activities, in terms of actually engaging countries, is TBD
- Discussed role and future of the task force moving forward through the next year and half
- Original value-add statement was quite broad, new value-add statement is more concise, but is not finalized yet
 - Per Dyness, worked to reflect other perspectives, want to share innovative implementation approaches, and strive to support countries to implement programs
 - Final report out anticipated end of December/early January
 - Value add statement includes PHC- should it be restricted to CH? Yes, was removed and substituted with CH
 - Re package of CH services: How much do we want to engage at the secondary and tertiary level? Grey area. Do have language around referrals and referral linkages, will be focusing on ETAT
 - Could strengthen our LOC in PSE TORs
 - When new value add is released- is there an assumption that subgroups will revise TORs/workplans? No- no expectation around starting from scratch
- Report out on subgroup: PSE is doing well, discussed our approach with other subgroups

2) Three work streams

- Got inputs from many people on the call
- Workstream 1: ideally lit review acted as a baseline for CHNRI members
- Workstream 2: now generating research questions from CHNRI members, asked for submission before the 21st- has now been extended to January 8th
- Workstream 3: had a call to plot out next steps, decided to do a landscape around PSE for CH, there's a lot of unpublished literature which is a challenge. Will regroup in new year to pull things together- would like more members to help with this activity
- Will keep going with workstreams as it's helped to engage members
- Would like to continue monthly calls in 2019
- Have a KM manager for supporting subgroups

3) AOB

- Private sector indicators for private sector engagement- look at the new USAID private sector engagement strategy from USAID

- Private sector health group has launched out of Health Systems Research Symposium, would maybe like to link up with them?
