

MILLENNIUM DEVELOPMENT GOALS 4 & 6

MDG4

Target: Reduce by two thirds (66%), between 1990 and 2015, the under-five mortality rate

Child mortality rates have declined by 41% since 1990

(note malaria causes 7% and AIDS 2% of all under 5 deaths)

MDG 6

Target: Have halted by 2015 and begun to reverse the spread of HIV/AIDS

2.7 million people, including 390,000 children, were newly infected with HIV in 2010, 21% lower than the 1997 peak and 15% lower than in 2001

Target: Achieve, by 2010, universal access to treatment for HIV/AIDS

At current treatment rates, less than 14 million people will be receiving antiretroviral therapy at the end of 2015, over one million short of the target

Target: Have halted by 2015 and begun to reverse the incidence of malaria and other major diseases

Incidence of malaria has decreased by 17% since 2000, and malaria-specific mortality rates by 25%
